1.0 SCOPE

This document is a preliminary specification of the electrical and mechanical requirements for a 40 pin custom high speed CMOS gate array I.C. device designated for use on the "TONG" project. The device is currently under development and there may be revisions to this document before it is Production Released.

2.0 APPLICABLE DOCUMENTS

The following documents, at the revision which is in effect on the date of the Purchase Order, shall form part of this specification to the extent referenced herein.

- a. CO99901 - Qualification and Reliability Requirements for Integrated Circuits and Discrete Semiconductors.
- b. CO99902 - Handling of Devices Susceptible to Static Discharge.
- c. CO99905 - External Visual and Solderability Requirements.
- d. CO99906 - Internal Visual Requirements for Atari Semiconductors.
- e. CO21538 - Electrostatic Discharge Sensitivity Testing.
- f. CO99931 - Dual In-Line Package, General Specifications.

3.0 DEVIATIONS

Product sold to Atari, Inc. under this specification must be identical to original approved samples. Any changes to the product must receive Atari, Inc. sample reapproval prior to delivery. Any deviation from this specification, or from any of the above listed applicable documents, must be approved in writing through the current Atari Deviation Procedure prior to any deviation taking place.

4.0 PRECEDENCE

This specification, including all approved deviations, shall be the governing document for device acceptance. In the event of conflict between this document and any other document, contract, specification or requirement, the manufacturer is responsible to notify Atari, Inc. for written disposition from the affected functional group(s), as identified within this document.

5.0 GENERAL REQUIREMENTS

5.1 ELECTROSTATIC DISCHARGE

Parts must conform to the requirements of the Atari, Inc. Specification #CO21538, Electrostatic Discharge Sensitivity Testing.

5.2 MARKING

Minimally, parts must be marked permanently and legibly as per Atari, Inc. Specification #C099901 para. 10.1.12 with:

- a. Atari Part Number
- b. Date Code
- c. Copyright Symbol and information:
 - © ATARI (Year); year must be represented as either the full year (e.g. 1983) or the last two digits (e.g. 83)
- d. Vendor or industry recognized identification symbol
- e. Pin #1 Identification

5.4 PACKAGE DESCRIPTION

Package shall be void-free plastic.

5.5 LEAD INTEGRITY AND SOLDERABILITY

As per Atari, Inc. Specification #C099901, para. 10.1.11 Lead Integrity and 10.1.16 Solderability.

6.0 ABSOLUTE MAXIMUM RATINGS

Limits beyond which the life of the part may be impaired. It is **NOT** implied that the device should be operated at these limits. If the part is operated at or near these limits, applicable manufacturers' derating calculations must be imposed.

ITEM	CHARACTERISTIC	LIMITS	UNITS
6.1	SUPPLY VOLTAGE V_{cc} TO GND (V_{cc})	-0.5 TO +7.0	V
6.2	VOLTAGE APPLIED TO ANY INPUT (V_{ai})	-0.5 TO +7.0	V
