

OK Michael!

First Mindbomb. I fixed the 'one!' bug I could find. in twist scroll. It was actually your fault you had included a number of tab characters in your scrolltext which caused a bus error!

I checked some other things that I thought were wrong but they are OK. If anyone has trouble with the screens Scrollmassacre Vector screen, Cyclic, or Bigsprite then it is definitely a ~~code~~ disk problem not bad code. The bug on Sinus dots

seems to be totally invisible to all except EI as I couldn't find it.

Also on a dist is the intro for the dist Maggie. With source. Please don't change any scrolls as you may cause an error. The source is not to be given out as I'm sure you know!

Please don't use that picture on the Menu desktop it looks fucking awful. Quality not because its a shit photo.

Also try and use different musix otherwise we'll get shit for copying ST-News.

Sync soundtrack is on
another disk along with
the inner circle screens.

Don't spread them or I'll
get in shit.

The other disks are final
compendium (two disks)

See ya soon. I'm home
on. 25th May so I'll see
you then.

All the Best

TIP

Liebe Mein klein Arshloch!

How's life, thanks for the disk. The music's good so it'll probably go on the new screen. Yep another one. This time I'm converting the 3D demo from the Amiga (the RED SECTOR one!). you know with the juggler and the helicopter. This renders the current 3D sprites obsolete so I'll take them off Mindbomb and probably put them on the Newcastle copy party demo.

I haven't had any more info on the CP yet but it is on SAT & SUN not Friday and Saturday. I'll ring you when I know more. You are more than welcome to stay for the following week and I was thinking of coming back the following week-end anyway on Thursday 22nd so we can probably go back together.

The only thing you must understand is that I do have lectures to go to so you'll have to look after yourself for some of the time, and also my floor is quite hard!

Anyway as I say I'll ring when I know more and tell you trains and stuff then. All the best and.

prepare to have your brains blown
out by my new screen. I'll try
and have MINDBOMB nearly fin-
ished - for the CP then all I'll need
to do will be add the last screens

BYE!

711

Hi Dave

A short letter containing a new copy of Mindbomb. Check out SINUS. PARASCROLL & MOVING BACK screens. Also if you get an opportunity try it out on a MEGA ST and tell me the result, it should work now I hope. I think I know how to make it work on STE as well but I haven't done that yet.

I've rewritten the protection routine now and I can't have my own protection so I guess this is good. TCB use the same protection idea on SO WATT. I think Stefan must have told 'Nick!

SO WATT is also in here. Its not bad, but I don't think its as good as Cuddly's or ours.

Screens to check out are OMEGA, SYNC and the 3 TCB screens.

Also in here is Richards original letter to give you a better idea what he wants.

If you get chaos then send it to me also any other good demos

All the Best
